~~THE DALLES OREGON~~
~~(SAS QUATCHI)~~

Dear Mr. Byrne:

I have received your letter of November 24th requesting an FBI Laboratory analysis of 15 unidentified hairs and tissue.

The FBI Laboratory conducts examinations primarily of physical evidence for law enforcement agencies in connection with criminal investigations. Occasionally, on a case-by-case basis, in the interest of research and scientific inquiry, we make exceptions to this general policy. With this understanding, we will examine the hairs and tissue mentioned in your letter.

They should be submitted to the FBI Laboratory, Scientific Analysis Section, J. Edgar Hoover Building, Washington, D.C. 20535, Attention: Special Agent [redacted]. In your reply please include available background information concerning the source of the specimen.

Sincerely yours,

5 DEC 20 1976

OUTSIDE SOURCE

Dear Mr Cochran :

I thank you for your letter of September 10th., 1976.

I am writing again to ask if you could possibly arrange for a comparative analysis of some hairs that we have here which we are unable to identify.

You may know something of the program in which we - through the part sponsorship of the undermentioned academy - are engaged. Should you not, I am enclosing an article which will partially explain what it is that we are trying to do.

Briefly, we do not often come across hair which we are unable to identify and the hair that we have now, about 15 hairs attached to a tiny piece of skin, is the first that we have obtained in six years which we feel may be of importance.

Please advise if you are able to perform this task for us.

Yours very truly,

Peter Byrne.
Director, the B.I.C.

Recognition at Last!

Though conceding that his existence is "hotly disputed," the Army Corps of Engineers has officially recognized Sasquatch, the elusive and supposedly legendary creature of the Pacific Northwest mountains. Also known as Big Foot, Sasquatch is described in the just-published "Washington Environmental Atlas" as standing as tall as 12 feet and weighing as much as half a ton, covered with long hair except for face and hands, and having "a distinctly humanlike form." The atlas, which cost \$200,000 to put out, offers a map pinpointing all known reports of Sasquatch sightings, and notes that a sample of reputed Sasquatch hair was analyzed by the FBI and found to belong to no known animal. The whatzit is reported to be extremely shy.

Gentlemen :

~~OUTSIDE OFFICE~~

This institution conducts research on and into the Bigfoot phenomenon of the Pacific Northwest of the USA. We have been in operation for nearly six years and we are associated with the Academy of Applied Science, of Boston, Mass.

From time to time we have been informed that hair, supposedly of a Bigfoot, has been sent for examination to the FBI., has been examined by the FBI., and with the conclusion, as a report of the examination, that it was not possible to compare the hair with that of any known creature on this continent.

Will you kindly, to set the record straight, once and for all, inform us if the FBI., has examined hair which might be that of a Bigfoot; when this took place, if it did take place; what the results of the analysis were.

Please understand that our research here is serious. That this is a serious question that needs answering and that an examination of hair, or the opposite, by the FBI., does not in any way, as far as we are concerned, suggest that the FBI., is associated with our project or confirms in any way the possibility of the existence of the creature(s) known as Bigfoot.

Yours very truly,

Peter C. Byrne.

The New York Times

Article Is It Bigfoot, Or Can It Be Just a Hoax?

By BOYCE RENSBERGER

Special to The New York Times

THE DALLES, Ore. — Within the vast forest wilderness of the Pacific Northwest there may live a species of shy, furry manlike creatures, perhaps relict and declining survivors from a time before modern man evolved. And then again there may not.

A remarkable body of evidence has been gathered over the last few years that points either to the reality of a species of large primates known as Bigfoot or Sasquatch that walks on two legs or to a long series of hallucinations and extraordinary hoaxes executed with anatomical and ecological expertise and with unusual restraint.

The evidence has persuaded at least one physical anthropologist of international standing that the Sasquatch phenomenon of footprints and sightings is real and in need of further study.

There is even speculation that a presumably

THE NEW YORK TIMES/ARND BRONKHORST

Furtive Creature, or Hoax, Roams the Northwest

Continued From First Page,
Second Section

extinct form of giant ape or apeman known as Gigantopithecus, whose fossils have been found in Asia, may have been an ancestor of a Sasquatch that migrated across the Bering land bridge to North America long before true humans.

The existence of such a surviving species seems wildly improbable and is discounted by most experts in primate evolution. A genuine find of such a creature would rank as one of the most significant discoveries of modern times.

To most Americans, the idea that a giant apeman could be living in the United States in 1976 and remain so elusive is far less credible than the idea that a creature could dwell in Loch Ness, a faraway, mist-shrouded Scottish lake, or that an abominable snowman, or yeti, could exist in the remote Himalayas.

Ex-Professional Hunter

And yet, at a time when increasing sums of money are being spent by reputable scientists to investigate Loch Ness, America's own "monster," with at least as much suggestive evidence behind it, is pursued by little more than weekend amateurs, riflemen vowing to bring one back dead, an assortment of eccentric or unreliable individuals and obvious perpetrators of fraud.

One of the few exceptions is Peter Byrne, a 50-year-old former professional hunter in Nepal, who switched from tiger shooting and yeti hunting to tiger conservation and Bigfoot hunting.

He operates the modest Bigfoot Information Center here in The Dalles, a small town in the heart of Bigfoot country, and he describes himself as the "only man alive" who has made a profession out of this extraordinary search.

He has been doing it for five years, supported by admission fees to a small exhibit here and by small donations from various sources, including the Academy of Applied Sciences, which is also the chief sponsor of the current Loch Ness expedition.

The center receives reports of Sasquatch sightings or of 16-inch footprints from all over the Northwest and investigates each report using a network of volunteers.

The New York Times, June 30, 1976

Bigfoot country is the mountainous area of the Pacific Northwest shown on map, with information center at The Dalles.

94 Credible Sightings

Most are eventually discounted as insubstantial or faked, but a handful hold up and are given high credibility. So far Mr. Byrne, though he has never seen a Bigfoot himself, has collected the details of 94 reported sightings that seem believable. There are many more reports of tracks.

An example was that of Jack Cochran, a logger from nearby Parkdale, who on May 12, 1974, was working with a crew in the Hood River National Forest. Mr. Cochran, who operates a crane that picks up logs, was taking a break in the cab of the crane and happened to look across the clearing. Fifty yards away he says he saw "this big hairy thing" standing silently.

"A chill went up my back," Mr. Cochran recalled. When he determined that it was not one of his co-workers, Mr. Cochran, a hunter and amateur artist who sketches wildlife, studied the creature. He said it was covered with thick black hair and stood about six and a half feet tall and had massive shoulders. He immediately assumed it to be a

Bigfoot and, no, any of the other forest animals that he knew well.

Walked Away Gracefully

Then it walked away gracefully like an athlete and disappeared over a hill into the trees.

The next day, May 13, at about the same time, 10 A.M., the same loggers were again taking a break. Mr. Cochran sat in his crane and kept his eyes on the forest but saw nothing unusual. His two companions, however, said that they walked into the woods for a little shade and were startled to see a big creature rise up out of the bushes and stride quickly away on two legs. One of the two men, Fermin Osborne, gave chase and even picked up some rocks to throw.

Later, investigators from the Bigfoot Information Center conducted a thorough search of the area. They found the creature's track—indistinct impressions of a soft but heavy foot leading from the edge of the clearing off across some wooded hills.

Paralleling them for part of the way were deep boot prints and even holes in the ground where rocks had been removed.

As in virtually all Sasquatch reports, the creature does nothing spectacular. It does not charge or roar or act ferocious in any way. In report after report the animal simply walks along or watches people until it senses it has been seen, and then it walks away.

So Tame a Story

Many people have said that hallucinations or hoaxes would be unlikely to yield so tame and dull a story.

Another group of sightings took place within a two-square-mile area just outside The Dalles. In 1967, four people said they saw a Bigfoot. The following year another four people reported another sighting. In 1969 there was no report. In 1970 two people saw one. And in 1971 there were four sightings by a total of nine people. Again the creature was said to be simply standing or walking. Eventually it or they simply walked away.

Tame or not, could a population of seven-foot-tall humanoids be living in the United States and remain unknown to science?

To those who have not seen the immense uninhabited and almost impenetrable forests that cover the mountains of the Pacific Northwest and British Co-

lumbia, it may seem hard to believe that there are thousands of square miles of wilderness where hardly anyone ever goes.

Reports Date From 1840

Sasquatch reports, which date from 1840, all come from a large but well-defined area that includes the mountains of southern British Columbia and the Cascade ranges of Western Washington, Western Oregon and Northern California.

The area covers about 125,000 square miles and could easily hide thousands of Sasquatches, particularly if one assumes, as the evidence suggests, that they are nomadic. If the Bigfoot is only a fantasy, it is strange that with one or two obviously faked exceptions, no reports have come from other parts of the country, not even from other wilderness areas in the West that are similar to the Cascade Mountains.

Still, skeptics argue, naturalists have explored the entire world and have surely catalogued all of the larger animals. But in fact new species are still being discovered. Within the last century Westerners learned for the first time of the pygmy hippopotamus, the Okapi, the Komodo lizard, the giant Panda, two species of large monkey, the pygmy chimpanzee and the mountain gorilla.

Indian Legends

Bigfoot believers say that the creature should not be considered unknown. Most of the Indian tribes in the area have legends and stories about such creatures. Sasquatch is one tribe's name for the creature but there are many others.

Scattered reports of giant manlike footprints or of actual sightings also occurred in the early writings of white settlers and down through the years. There are scores of reports from the last decade when people like Mr. Byrne started soliciting them.

While newspaper accounts frequently make it appear that a Bigfoot report involves only a single large blurry footprint, the more typical discovery is of a long track of footprints that can sometimes be followed for miles. Where the ground is soft the prints are sometimes detailed enough that anatomists can analyze the structure of the foot that made the print.

Dr. John Napier, a British anthropologist who is a specialist in the anatomy of human feet, has for 20 years studied yeti and Sasqua-

footprints, any of which have been phony, applied or cast in plaster of Paris.

Bears Too Small

Although it is often said that bears made the prints, the bears of the Pacific Northwest are too small to make a print more than half the size ascribed to the Sasquatch.

What about a hoaxer who carves big feet, straps them on his boots, and tramps off through the woods? Dr. Napier says this would be easy to spot for the fake foot would not flex or conform to the ground the way a real striding foot does. Given the depth of some of the prints, he calculates it would require the hoaxer to carry something like 500 pounds of extra weight. Someone going to all that trouble, it is felt, would be unlikely to put tracks in remote forests where they might never be discovered.

In Dr. Napier's view, one of the most persuasive sets of footprints was found in 1969 near Bossburg, Wash. The half-mile-long track contained 1,089 prints, and the right prints appear to have been made by a crippled foot. At one point whatever made the prints stepped easily over a 43-inch-high fence.

Look Very Human

In the deformed print, Dr. Napier can see not only obviously abnormal outlines but also shifts in weight distribution from one part of the foot to another, all of which suggest that the creature suffered a crushing injury of the foot in youth. The prints look very human, Dr. Napier says, except that they are 17½ inches long and 7 inches wide.

"It is very difficult to conceive of a hoaxer so subtle, so knowledgeable and so sick who would deliberately fake a footprint of this nature," Dr. Napier wrote in his book, "Bigfoot." "I suppose it is possible, but it is so unlikely that I am prepared to discount it."

After examining the Bossburg tracks and many others, Dr. Napier concludes that "they are not the footprints of modern man" but "could conceivably be the footprints of unknown members of the human family."

One of the most controversial pieces of evidence is an 18-second film that shows a furry creature striding along a creekbed in a California forest and then disappearing into the trees. It has been examined by various experts, and no one can conclusively prove that it is either a fake or authentic. Mr. Byrne has declared other film fakes, but he says of this one that he is 95 percent certain it is real.

Something Needs Explaining

After examining all the evidence for and against the Sasquatch, Dr. Napier, who thinks the film is phony, concludes: "I am convinced that the Sasquatch exists, but whether it is all that it is cracked up to be is another matter altogether. There must be something in northwest America that needs explaining, and that something leaves manlike footprints."

It has been argued by some that there is not enough food to support a creature of Bigfoot's size in the typical coniferous forests of the Northwest. While there are not nearly as many edible plants as, for example, in the gorilla's tropical habitat, the woods do support bears of considerable size.

While some Sasquatch believers feel that the only way to convince the world of the creature's existence is to shoot one and bring back its corpse, Peter Byrne abhors such thoughts.

"There probably aren't all that many to begin with," he said. "I think that with a decent effort we could get photographic proof. They should be protected."

One recent evening, Mr. Byrne took his cameras, two volunteer investigators and a visitor and drove out of The Dalles and onto logging roads that wind through the Hood River National Forest, a region where Sasquatches have been sighted.

At a high clearing, Mr. Byrne set up a night observation device, on loan from the Army. With only starlight to illuminate the landscape, its battery-powered light amplifiers project almost the equivalent of a daylight scene onto a small viewing screen. After a few turns scanning the distance and waiting for a Bigfoot that might have been drawn out of curiosity, everyone crawled into sleeping bags for the night. No Sasquatch came.

When Mr. Byrne got back to his office, the telephone answering device had recorded a call from a man in Seattle who said he had seen a Bigfoot on May 17.

DETAILS:

The 7/6/75 issue of the Washington Star-News carried cutline and photograph (attached) captioned, "Recognition at Last!" concerning the recently published U.S. Army Corps of Engineers "Washington Environment Atlas." The Atlas contained information regarding the possible existence of Sasquatch, aka "Bigfoot," the legendary creature of the Pacific Northwest mountains.

Memorandum to Mr. McDermott
Re: REQUESTED EXAMINATION OF
UNIDENTIFIED HAIR FROM THE
BIGFOOT INFORMATION CENTER
AND EXHIBITION
THE DALLES, OREGON

This Atlas reported that "a sample of reputed Sasquatch hair was analyzed by the FBI and found to belong to no known animal." Inasmuch as FBI Laboratory experts had no records or recollection of such an examination, Dr. Steve Rice, Editor of the Army Atlas was telephonically contacted in Seattle, Washington. After checking, Dr. Rice was unable to locate his source of the reported FBI hair examination.

By letter dated 8/26/76 Mr. Peter C. Byrne, Director, The Bigfoot Information Center and Exhibition, The Dalles, Oregon, inquired whether this reported FBI hair analysis was accurate. In my letter dated 9/10/76 Mr. Byrne was told the FBI Laboratory had no references to such an examination (copies attached).

By letter dated 11/24/76 Mr. Peter Byrne again corresponded with the FBI Laboratory enclosing a New York Times article dated 6/30/76 captioned, "Is it Bigfoot, Or Can It Be Just A Hoax?" (attached). The article contained a history of Bigfoot and the activities of Mr. Byrne and others connected with the mystery. Mr. Byrne's letter requested the FBI Laboratory examine and attempt to identify 15 hairs attached to a piece of skin.

According to the New York Times article, Mr. Byrne's five-year search for Bigfoot is supported by the Academy of Applied Science (AAS), Boston, Massachusetts, admission fees to his exhibit and small donations from other sources. The AAS is the chief sponsor of the current Loch Ness expedition in Scotland. AAS is listed in the Encyclopedia of Associations as being founded in 1962 and dedicated to applied science and engineering. It claims 300 members and one staff member.

Memorandum to Mr. McDermott
Re: REQUESTED EXAMINATION OF
UNIDENTIFIED HAIR FROM THE
BIGFOOT INFORMATION CENTER
AND EXHIBITION
THE DALLES, OREGON

A search of Bureau indices contained no information identifiable with Mr. Byrne or the Bigfoot Information Center and Exhibition.

TO : Mr. McDermott

FROM : J. Cochran, Jr.

SUBJECT: REQUESTED EXAMINATION OF
UNIDENTIFIED HAIR FROM THE
BIGFOOT INFORMATION CENTER
AND EXHIBITION
THE DALLES, OREGON

DATE: 12/13/76

PURPOSE:

To set out background information concerning published reports that the FBI has analyzed hair in connection with the search for Sasquatch, aka "Bigfoot" and to recommend that requested hair examination received 11/24/76 from Peter Byrne, Director, Bigfoot Information Center and Exhibition be granted. ORP 007

SYNOPSIS:

Background information concerning Sasquatch, set out with request received 11/24/76 from Mr. Peter Byrne, Director of the Bigfoot Information Center and Exhibition, The Dalles, Oregon, for FBI Laboratory examination of 15 unidentified hairs and tissue related to search for Sasquatch. STS Division recommends request for examination be granted in interest of research and scientific inquiry.

CURRENT BUREAU POLICY:

This does not represent a change in Bureau policy. In addition to its primary mission of examining physical evidence in criminal matters for Federal, state and municipal law enforcement, the STS Division's Laboratory Branch has a history of making its unique services and expertise available to the Smithsonian Institution, other museums, universities and government agencies in archeological matters and in the interest of research and legitimate scientific inquiry.

*LABORATORY EXAMINATIONS AND
INQUIRIES CONCERNING THE BIGFOOT
INFORMATION CENTER AND EXHIBITION*

The hairs which you recently delivered to the FBI Laboratory on behalf of The Bigfoot Information Center and Exhibition have been examined by transmitted and incident light microscopy. The examination included a study of morphological characteristics such as root structure, medullary structure and cuticle thickness in addition to scale casts. Also, the hairs were compared directly with hairs of known origin under a comparison microscope.

It was concluded as a result of these examinations that the hairs are of deer family origin.

The hair sample you submitted is being returned as an enclosure to this letter.

PURPOSE:

To report the results of the examination of hairs from the captioned organization.

DETAILS:

By memorandum, Cochran to McDermott, dated 12/13/76, we agreed to examine a hair sample on behalf of the captioned organization. A letter to this effect dated 12/15/76, was sent to Mr. Peter Byrne, Director of captioned organization.

Recently, the hair sample (photograph attached) was delivered to the Laboratory by Mr. Howard S. Curtis, Executive Vice President, Academy of Applied Science, Boston, Massachusetts. This Academy sponsors the captioned organization.

The hairs were determined to be from a member of the deer family.

Mr. Curtis requested that a letter setting forth the results of the examination be furnished to him since Mr. Byrne will be out of the country for several months. He also requested that the hairs be returned to him.

Dear Mr. Cochran:

Thank you very much for sending the analysis of hair
and skin which had been sent to us by Mr. Peter Byrne.
We are most appreciative of your work and that of Special
Agent [redacted] My conversation with him was most pleasant
and informative.

Mr. Byrne is expected back from Nepal within a week or
two and will receive copies of our correspondence.

Cordially,

Howard S. Curtis
